ZI-400

Product Advantages *(aviation & aerospace industries)*

- * **Cost-effective. Very concentrated.** usually applied at a **30:1** ratio (water:chemical). Z.I. Chemicals has many lower priced competitors offering products that do not meet all of the required performance criteria, and a closer look usually reveals that those products must be used at high concentration levels, making them only "appear" more competitive on the surface. (see also "Multi Usage" below)
- * **Anti-corrosion.** This attribute is not required by any aviation specifications, which only require that a product be "non-corrosive" which is much different than our preventive and proactive "anti-corrosion" approach.
- * **Safety.** ZI-400 offers not only **environmental safety**, but also **worker safety**, and is approved by many governmental authorities worldwide. Our Australian distributor even went so far as to gain approval for **direct discharge** into the sewage systems of that country!
- * **Field Proven.** Since it's original commercial aviation and military approval in 1990, ZI-400 has gone on to win accolades (refer to the Australian Defence Department report) among many quality conscience customers, resulting in it becoming a "standard" for others to achieve.

NASA: Z.I. Chemicals was **chosen** to be **prime contractor** to United Space Alliance for exterior and interior cleaning of our Space Shuttle fleet. This includes such tough jobs as cleaning the rotor speed brakes after each landing.
- * **Multi Usage.** Since ZI-400 is also excellent for shop maintenance (parts cleaning in such equipment as dip tanks and ultrasonic cleaners, as well as Ground Support Equipment "GSE" and facilities cleaning, ie. floors, restrooms, etc.) it can be purchased in higher volume. This reduces both overall cost as well as the total number of different products needed to keep in inventory at the customer's maintenance facilities.
- * **Approvals:** **Boeing** Interior & Exterior, **Douglas & AMS** Interior & Exterior cleaning (accepted by Airbus).
